Proven Dependability Since 1998

Tank Moving Trailer with Hydraulic Arm

Versatile

Designed for oil storage tanks and similar containers.

Innovative Design

The saddle of this trailer is topped by a hydraulic arm that reaches over and grabs the top of the tank. This arm can extend or retract and change its angle.

Once the top of the tank is secured, it is tipped over on its side, onto the cradle, ready for transport. This process is simple and effective. At the destination, the tank is raised, again without compromising worker safety.

Height Risk to Workers Eliminated

Due diligence. "An employer shall take all reasonable measures to institute engineering techniques, systems, work practices or administrative controls that eliminate or reduce to a practical minimum those hazards for which personal protective equipment would otherwise be required."

No worker needs to climb on icy, rotten or unsafe roofs to tie chains, eliminating the confined space requirements of a second picker with man-bucket and safety watch.

No worker needs to work at heights requiring fall protection PPE.

Lower Cost to Customer

Available Options

- Tandem or Tridem configuration all with ABS Braking
- Self-contained power options
- Individual axle fenders
- Additional removable saddles
- Double ladder carrier
- Variety of paint colours available
- Toolbox
